PART I: THE MICROBES

Chapter 1 The Microbial World
1.1 The Microbes
1.2 Microbial Genetics
1.3 Microbial Metabolism and Ecology
1.4 Microbes and Disease

Chapter 2 Bacteria
2.1 Morphology of Bacterial Cells
2.2 The Cytoplasm
2.3 The Cell Envelope
2.4 The Bacterial Cytoskeleton
2.5 The Bacterial Cell Surface
2.6 Diversity of Bacteria

Chapter 3 Eukaryal Microbes
3.1 The Morphology of Typical Eukaryal Cells
3.2 Diversity of Eukaryal Microbes
3.3 Replication of Eukaryal Microbes
3.4 The Origin of Eukaryal Microbes
3.5 Interactions Between Eukaryal Microbes and Animals, Plants, and the Environment

Chapter 4 Archaea
4.1 Archaea as a Distinct Domain of Life
4.2 Archaeal Cell Structure
4.3 Diversity of Archaea

Chapter 5 Viruses and Subviral Particles
5.1 Introduction to Viruses
5.2 Origins of Viruses
5.3 Cultivation, Purification and Quantification of Viruses
5.4 Subviral Particles
5.5 Virology Today

Chapter 6 Microbial Growth and Cultivation
6.1 Nutritional Requirements of Microbes
6.2 Measuring Microbial Population Growth
6.3 Factors Affecting Microbial Growth
6.4 Isolating Microbes in the Laboratory
6.5 Preventing Microbial Growth

PART II: MICROBIAL GENETICS

Chapter 7 DNA Replication and Gene Expression
7.1 The Role of DNA
7.2 DNA Replication
7.3 Transcription
7.4 Translation
7.5 The Effects of Mutations

Chapter 8 Viral Replication Strategies
8.1 Recognition of Host Cells
8.2 Viral Entry and Uncoating
8.3 Viral Replication
8.4 Viral Assembly and Egress
8.5 Antiviral Drugs

**Chapter 9 Bacterial Genetic Analysis**

9.1 Bacteria as Subjects of Genetic Research
9.2 Genome Organization: Chromosomes and Plasmids
9.3 Mutations, Mutants and Strains
9.4 DNA Transfer
9.5 Tools of Bacterial Molecular Genetics

**Chapter 10 Microbial Genomics**

10.1 Genome Sequencing
10.2 Genomic Analysis of Gene Expression
10.3 Comparative Genomics
10.4 Metagenomics

**Chapter 11 Signal Transduction and Regulation of Gene Expression**

11.1 Differential Gene Expression
11.2 Chemotaxis
11.3 Repressors and Activators
11.4 The Lac System
11.5 Two-Component Regulatory Systems
11.6 Quorum Sensing
11.7 Global Gene Regulation

**Chapter 12 Biotechnology and Industrial Microbiology**

12.1 Recombinant DNA Technology
12.2 Production of Pharmaceuticals
12.3 Industrial Biotechnology
12.4 Agricultural Biotechnology

**PART III: MICROBIAL PHYSIOLOGY AND ECOLOGY**

**Chapter 13 Metabolism**

13.1 Energy, Enzymes and ATP
13.2 Central Processes in ATP Synthesis
13.3 Carbon Utilization in Microorganisms
13.4 Respiration and the Electron Transport System
13.5 Metabolism of Non-Glucose Carbon Sources
13.6 Photosynthesis
13.7 Nitrogen and Sulfur Metabolism
13.8 Biosynthesis of Cellular Components

**Chapter 14 Biogeochemical Cycles**

14.1 Nutrient Cycling
14.2 Carbon Cycle
14.3 Nitrogen Cycle
14.4 Sulfur Cycle
14.5 Iron Cycle
14.6 Phosphorous Cycle
14.7 Other Biogeochemical Cycles

**Chapter 15 Microbial Ecosystems**

15.1 Ecosystem Physiology
15.2 Microbial Community Structures
15.3 Aquatic Ecosystems
15.4 Atmospheric Ecosystems
15.5 Soil Ecosystems
15.6 Subsurface Ecosystems
15.7 Hydrothermal Vents
15.8 Biodegradation and Bioremediation

Chapter 16 Food and Water Microbiology
16.1 Food Spoilage
16.2 Food Safety
16.3 Microbiological Aspects of Water Quality
16.4 Wastewater Treatment
16.5 Pathogen Detection, Monitoring and Risk Assessment

Chapter 17 Microbial Symbionts
17.1 Types of Microbe-Host Interactions
17.2 Symbionts of Plants
17.3 Lichens
17.4 Symbionts of Vertebrates
17.5 Symbionts of Invertebrates

PART IV: MICROBES AND DISEASE

Chapter 18 Introduction to Infectious Diseases
18.1 Pathogenic Microbes
18.2 Proving Cause and Effect in Microbial Infections
18.3 Epidemic Diseases
18.4 Emerging Diseases

Chapter 19 Innate Host Defenses against Microbial Invasion
19.1 Immunity
19.2 Barriers to Infection
19.3 The Inflammatory Response
19.4 The Molecules of Innate Immunity
19.5 The Cells of Innate Immunity
19.6 Invertebrate Defenses

Chapter 20 Adaptive Immunity
20.1 Features of Adaptive Immunity
20.2 T cells
20.3 Antigen Processing
20.4 Antigen-Presenting Cells
20.5 Humoral and Cell-mediated Immune Responses
20.6 B cells and the Production of Antibody

Chapter 21 Bacterial Pathogenesis
21.1 Bacterial Virulence Factors
21.2 Survival in the Host – Strategies and Consequences
21.3 Evolution of Bacterial Pathogens

Chapter 22 Viral Pathogenesis
22.1 Recurring Themes in Viral Pathogenesis
22.2 Interactions with the Host - Strategies and Consequences
22.3 Viral Infections and Cancer
22.4 Evolution of Viral Pathogens

Chapter 23 Eukaryal Microbe Pathogenesis
23.1 Recurring Themes in Eukaryal Microbe Pathogenesis
23.2 Survival in the Host – Strategies and Consequences
23.3 Macroscopic Eukaryal Pathogens
23.4 Evolution of Eukaryal Pathogens

Chapter 24 Control of Infectious Diseases
24.1 Historical Aspects of Infectious Disease Treatment and Control
24.2 Antimicrobial Drugs
24.3 Antimicrobial Drug Resistance
24.4 Epidemiology
24.5 Predicting and Controlling Epidemics
24.6 Case Study 1: Polio - A Near Success
24.7 Case Study 2: Foot-and-Mouth Disease - The Making of an Epidemic
